

Media release

Zurich Airport, January 10, 2008

SWISS carries a record 12.2 million passengers in 2007

SWISS transported 12 208 558 passengers on its scheduled services last year – the first time in its history that annual passenger numbers have exceeded 12 million, and a 13.2% increase on the 10.8 million of 2006. While total production was increased by a substantial 13.1%, the additional capacity was fully absorbed by the market, and SWISS even raised its systemwide seat load factor to 80.2%, a marginal improvement on the 79.8% of the previous year. Slight increases were seen in seat load factor for both intercontinental and European services: seat load factor on intercontinental routes stood at 84.3% (2006: 83.8%), while seat load factor on the European network amounted to 71.8% (2006: 71.3%).

A total of 1 001 765 passengers travelled on SWISS in December 2007, a 10.4% increase on the 907 092 of the prior-year period. And despite a sizeable increase in capacity, the 78.2% seat load factor recorded for the month was only slightly below the 79.7% of December 2006.

December seat load factor on **intercontinental services** was a 0.5-percentage-point improvement on the prior-year month. While total production saw a 12.6% increase in available seat-kilometre (ASK) terms, total traffic volume in revenue passenger-kilometres (RSK) was 13.4% up on its prior-year equivalent.

Seat load factor on **European services** was also up 0.5 percentage points on December 2006. With total ASK production showing a 14% increase, total RSK traffic volume was 14.7% higher than for the prior-year period.

The airfreight business of **Swiss WorldCargo** showed positive trends last year. Total cargo tonne-kilometres sold were an 8.2% improvement on 2006; and cargo load factor (by volume), while slipping from 85.5% to 84.6%, still remained at an encouragingly high level.
